Re: *Securexam (CA) Update*

An updated version of *Securexam (CA)* has been released on June 8th, 2010. This update is **MANDATORY** for all users.

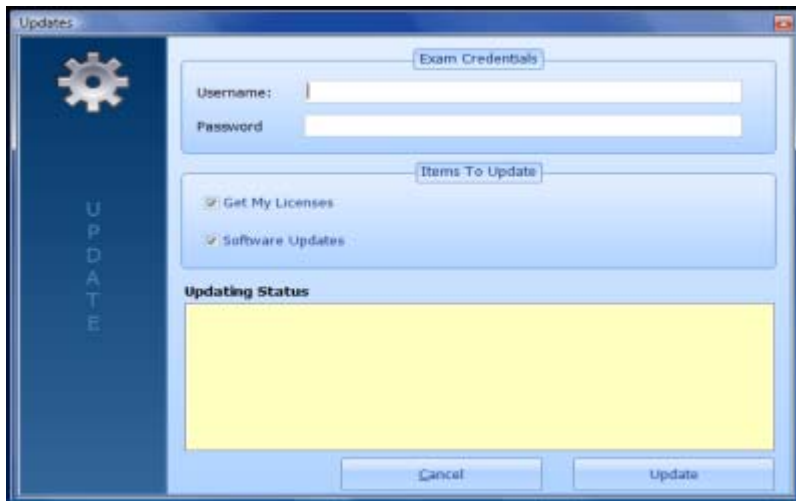

To update, follow these instructions:

Launch the software and choose your language.

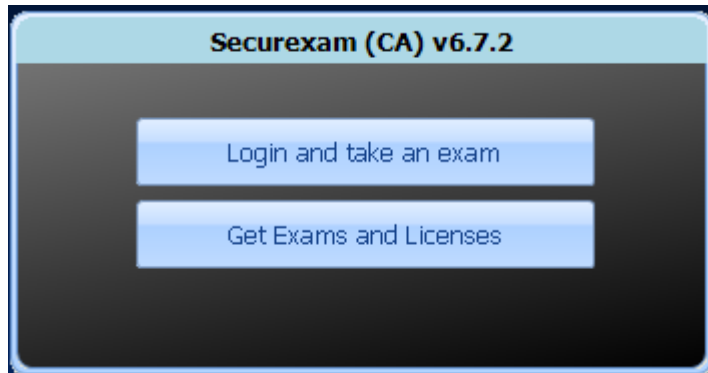

Click on “Get Exams and Licenses” – Note: Version is v6.5.5

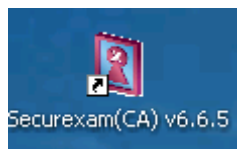

Make sure the “Software Updates” box is checked and click “Update”.

The software will download the requisite patches and upgrade your software to version 6.7.2, which you will be able to see as the version number after the software re-launches once the update has been applied.

The *Securexam* icon on the desktop will not change and will still have the original version number (6.6.5).

Once the software is updated, it is highly recommended that you take a qualification exam to insure that you have the latest version of the software and everything is operating normally as expected.

Additionally, the software installer on the website (<http://cica.softwaresecure.com>) has been replaced with the latest version for those who prefer to just reinstall. The latest version has been made available to the firms for those requiring their firm's assistance.
